

Confined Space Awareness

- An average of 100 confined space related deaths occur each year in United States workplaces.
- Do you know what a confined space is?
- Have you identified all the confined spaces in your workplaces?
- Do you have any permit-required confined spaces?
- What are the potential atmospheric hazards of your confined spaces? Physical hazards?
- Do your workers have confined space training? Is it understood? Documented?
- Will "911" provide a confined space rescue for you?

If you cannot answer one or more of the above questions, you may need confined space training. Consider this training to answer your questions.

Topics of Discussion:

- Background and Statistics
- Managing Your Safety and Health
- OSHA Regulations & DLS Enforcement
- Confined Space Regulations
